The PHP code within the webpage is processed (parsed) by a PHP engine on the web server, which dynamically generates HTML. The HTML, which contains the webpage content, is then sent to the user's web browser. Therefore, the user never sees the actual PHP code contained in the webpage, even when viewing the page source.

php - Fatal error: Call to undefined function: imagecreate ...
If you set 'zend.script_encoding' to UTF-8 and save the file in UTF-16, PHP will not be able to interpret the file, let alone the declare statement. As long as you use ASCII compatible encodings (i.e. ISO-8859-1(5), UTF-8 etc) for both the file encoding as the zend.script_encoding, you should be fine.
